In a fast-paced and increasingly digital business environment, access to information is critical. Massive amounts of stored paper documents presents a problem to the marketplace in that the resources and organizational energy required to access that information is costly. iSafe Solutions represents an important new business services strategy that can deliver custom solutions to this common problem by turning the mountains of paper into indexed, searchable, digital knowledge available on the desktop. This value added opportunity can enhance efficiency and reduce costs throughout your organization.

iSafe has recently engaged Corporate Finance Associates to raise growth capital to accelerate their growth plans in order to better serve a large and growing customer base in this underserved market.
